Derbyshire Tube Support
#19-00416

Wells Arm Protector
(Adult Stainless Steel) #19-00417

The NEW **GIOFLEX Flexible Support System for Anesthesia Tubing!** An adaptable and reliable device that allows secure flexible positioning of variously sized anesthesia tubing between equipment and the patient. Improves the safety of all types of general anesthesia delivery. Particularly beneficial during ENT and Neuro cases where access to the patient's head and ET tube is limited. Clamps to the OR table rail with unlimited positions. #19-00-392

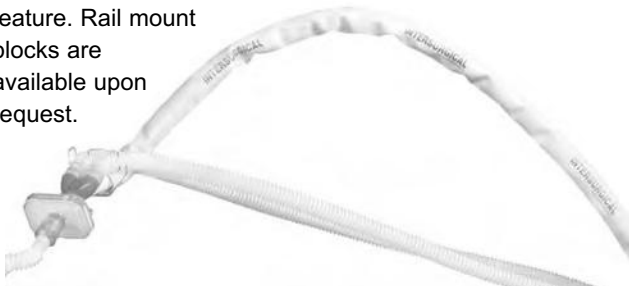

Knucklehead®

Intersurgical Incorporated introduces the unique Knucklehead® tube support system. It has been designed to overcome the traditional problems associated with tube support arms, such as positioning and patient comfort.

The product has been designed for use both in Anesthesia and the ICU. It may be attached directly to the ventilator and offers maximum stability of the breathing system while at the same time it may be positioned freely as required.

The Knucklehead® is available with either a 22mm or 15mm circuit tube holder and comes with a male DISS O₂ ventilator connection as a standard feature. Rail mount blocks are available upon request.

Knucklehead® 22mm

#DM-9437 Case Quantity:1

Knucklehead® 15mm

#DM-9438 Case Quantity:1
