# FLOW-SAFE TUBING KIT

A Simple Solution to a Serious Problem.

The technology is here.

Adjusting FiO<sub>2</sub> is now just a matter of utilizing the Flow-Safe Tubing Kit.

### · ADJUST FiO<sub>2</sub>

- By adjusting the flow of each flowmeter, the oxygen percentage can be adjusted while maintaining the same pressure.
- Blending of  ${\rm O}_2$  and Air reduces oxygen consumption.

Flow-Safe I

#### · EASY-TO-USE

 Just attach "Y" shape tubing to both an oxygen flowmeter and compressed air flowmeter and adjust the flow from each flowmeter.

#### NO CAPITAL EQUIPMENT COSTS

- Purchase separately or in a kit with Flow-Safe, Flow-Safe II or Flow-Safe II = 7

#### ORDERING INFORMATION

<b>PART #</b> #10-55326	<b>DESCRIPTION</b> Flow-Safe® Tubing Kit	PACKAGING 10/Box
#10-57037	Flow-Safe with integral manometer, pop-off, 7' oxygen tubing and Flow-Safe Tubing Kit. Supplied without mask.	5/Box
#10-57237	Flow-Safe II® with integral manometer, pop-off, 7' oxygen tubing and Flow-Safe Tubing Kit. Supplied without mask.	5/Box
#10-57322	Flow-Safe II <sub>EZ</sub> ® with integral nebulizer, manometer, pop-off, 7' oxygen tubing and Flow-Safe Tubing Kit. Supplied without mask.	5/Box

NOTE: The listed output is nominal value only, actual output may vary depending upon patient tidal volume, breath rate and the existence of mask leaks. Faster breathing rates lower oxygen concentration while slower rates result in higher oxygen concentration. Large tidal volumes lower oxygen concentration, small tidal volumes result in higher oxygen concentration.
