

# Simple Needle Visualization for Konica Minolta Ultrasound Systems.

## Simple Needle Visualization (SNV™) software

Konica Minolta's SNV software incorporates an advanced algorithm that utilizes both the in-plane and out-of-plane methods to improve needle visibility, especially in steep angle approaches. The SNV feature lets you increase your accuracy in needle placement, making it the ideal solution for guided injections.

- Adjust the sensitivity of the needle visualization depending on the type of tissue
- Program prompts help determine the proper level of adjustment
- Auto setting takes the guesswork out of where to steer the ultrasound beam, or work manually by choosing the direction for beam placement
- Can be used with both linear and curved transducers
- Improve injection accuracy by visualizing injectate

# The ideal software solution for ultrasound needle guided injections.

## Needle visualization for rapid, confident decisions

Needle visualization is essential for accurate and successful ultrasound-guided procedures. From regional anesthesia to biologic injections, ultrasound not only images the anatomical structures but also highlights the advancing needle. Simple Needle Visualization (SNV™) software, available with the SONIMAGE® HS1 and SONIMAGE® MX1 Ultrasound Systems, provides greater needle visibility of both the tip and shaft for confident needle placement.

## Easy to use

Konica Minolta ultrasound systems provide the accessibility and clinical confidence you need to make informed decisions at the point-of-care. Our ultrasound imaging solutions build economic value with a low total cost of ownership, improved workflow and reimbursable procedures. Our systems enhance patient satisfaction with immediacy of information and reduced patient wait times.
